

## Code Snippets

Benefit from our communities extensive knowledge and be updated with the latest snippets from Zend's site.

Edit -> Show Snippets -> 'Update Snippets'.

## Code

### Documentation

Create documentation for your PHP files in your favorite HTML style.

Tools -> PHPDocumentor

## SQL Connectivity

Add SQL database connection in one click.

Right click in the SQL tab and choose 'Add Server'.

## Code Templates

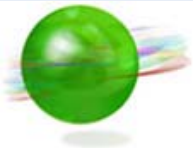

Improve your coding speed by adding code templates to the existing list and using them during developing.

## Remember SQL Queries

Every SQL query is saved in a database history, so you can easily restore and execute an old one.

## Profile URL

Enter the URL you want to profile and receive full time report information.  
Debug -> Profiler URL

## Instant URL Debugging

Enter the URL you want to debug and press Debug -> Debug URL.

## Code Folding

Manage large amounts of code by automatically collapsing and expanding.

Tools -> Preferences -> Editing

## Customise Scheme

Use a default scheme or define your own.

Tools->Preferences-> Colors & Fonts

## Keymap

### Customization

Create a unique key combination for each action.

Tools->Preferences->KeyMap

## Code Analyzer

Get analysis information with great ideas on how to improve your code.

Right click on a directory in the project tab and press Analyze

## Clone View

Create a clone of the current editor for viewing and editing two files at the same time. Right click in the editor and choose 'Clone View'

## Zend Studio 5 Default Keymap
